

Tracking down microplastics

TU Berlin: Developing avoidance strategies with innovative superfine mesh and sampling baskets

WORLD WIDE WEAVE

Picture 1: Microplastics, i.e. plastic particles less than five millimeters in size, are a global environmental problem.

Picture 2: The sampling basket is hung in drains and facilitates reliable sampling of all street runoff water.

Tracking down microplastics

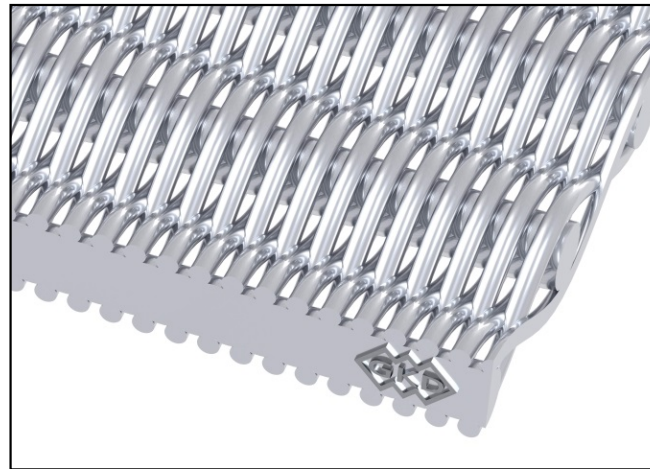

TU Berlin: Developing avoidance strategies with innovative superfine mesh and sampling baskets

WORLD WIDE WEAVE

Picture 5: The optimized dutch weaves from GKD secure a strict separation limit up to six μm with a high requisite flow rate.

Picture 6: The excellent performance offered by optimized weaves can be attributed to their special weave with slot-shaped pores on the mesh surface and larger pores inside the mesh.

Picture 7: According to the German Federal Environmental Agency up to 111,000 tonnes of tire abrasion materials are produced each year in Germany alone.

Picture 8: Daniel Venghaus M.Sc. is engaged in research at the TU Berlin in the field of urban water management.
